Projected Revenue

Per Plot

Assuming pepper falls to **N1000/kg** = **N1,440,000**

Assuming pepper rises to **N2000/kg** = **N2,880,000**

Per Acre

Assuming pepper falls to **N1000/kg** = **N8,640,000**

Assuming pepper rises to **N2000/kg** = **N17,280,000**

Kindly Note - A realistic margin of error has carefully been considered in other to exceed projected yield. The price realism is also in place for market dynamics and competitiveness

Revenue payable during the period of Harvest duration

A photograph of farmers harvesting sweet potatoes in a field. The scene is overlaid with a semi-transparent green filter. In the foreground, a farmer wearing a wide-brimmed hat and a long-sleeved shirt is bent over, pulling sweet potatoes from a mound of soil. Several large, reddish-orange sweet potatoes are visible on the ground. In the background, other farmers are working in the field, and a tractor is visible. The overall atmosphere is one of active agricultural work.

Sweet Potato

Cultivation Model

Plantation is situated on company reserved area for enhanced result, structured management and reasonable irrigation setup and control

Cultivation Commencement

June - July 2026

Harvest Commencement

September

Harvest Duration

September - October
